Keeping your Campus Safe

SafePointe

MANAGE THE INCIDENT

SafePointe brings together all data necessary to manage an incident into a single, easy to use dashboard.

COMMUNICATE

SafePointe improves communication between university staff, campus police and external resources through real time alerts and notifications.

COLLABORATE

SafePointe can be shared within the university, campus police and with external emergency responders enabling real-time collaboration.

COORDINATE

SafePointe provides a single repository for contacts, procedures, and other critical data needed to quickly identify resources and coordinate incident response efforts.

INVESTMENT PROTECTION

SafePointe integrates with existing security systems and data sources, protecting the university's technology investment.

ENHANCING CAMPUS SAFETY WITH REAL-TIME SITUATIONAL AWARENESS.

Campus safety is top of mind for government officials, university administrators, staff and parents. Universities are uniquely challenged to create balance between enabling student freedom on campus and ensuring student safety. No longer is campus security or local law enforcement the only emergency responders. Incidents happen quickly and response must be immediate. University administrators, professors, and staff must be prepared to act until campus police or local law enforcement arrives.

There are many safety solutions today that focus on a single aspect of improving campus safety. Camera systems provide a real-time view of what is happening. Access control systems secure entrances. Panic buttons and blue light phones provide immediate alert of potential danger. During an incident, how quickly can you access these systems to gather critical data needed to respond to an incident?

SafePointe delivers a dynamic dashboard enabling a real-time view of the incident as it unfolds and quick access to critical data from virtually all security systems and data sources.

An Enhanced
Common Operating Picture

The SafePointe School Safety solution is designed to enhance situational awareness and collaboration between university staff, campus security and external emergency responders by providing real-time access to critical information sources.

SafePointe's integration framework provides interoperability with facility information sources such as:

♦ Emergency alert elements: panic buttons, blue light phones, intercom systems, shot detector systems, etc.
♦ Access control: electromagnetic door locks, card access readers, intrusion sensors, etc.
♦ Environmental monitoring sources: fire alarm, HVAC, etc.
♦ Information Systems: visitor management, student data systems, etc.
♦ Campus Video Cameras
♦ First Responder Systems: Computer Aided Dispatch & 9-1-1 Emergency Call Systems

SafePointe enhances incident response by providing real-time information sharing between university staff, first responders and other resources that require incident or event information.

The SafePointe solution presents data from critical information sources to a floorplan-based enhanced Common Operating Picture (COP) dashboard. The dashboard provides a consolidated real-time view to authorized university and first responder resources. Users can view details from facility information sources, access building floor plans and evacuation routes, activate access control and emergency alert systems, monitor cameras, and view location information from GPS enabled vehicles including first responders.   As an event occurs, all stakeholders have the same real-time view of the situation.

SafePointe also provides integrated messaging to enhance collaboration between campus personnel and emergency responders. Users are notified by audio alerting as the message is displayed on the dashboard.   Messages can also be distributed via email and text messaging.

SafePointe Proven Integrations

Student Information Systems

Cameras
♦ ONSSI®, Axis®, Pelco®, DvTel®, Milestone, Ex-acQVision®
♦ Analogue to Video Cameras – (Axis® Video Encoder)
♦ EvoStream® Video Management Server

Access Control Systems
♦ Stanley
♦ S2

Public Safety & Incident Management
♦ Rapid Responder®
♦ Rhodium™ ICS
♦ Computer Aided Dispatch Systems: Tritech, Tiburon®, Versaterm®, Northrup Grumman
♦ 9-1-1 Systems: Cassidian Sentinel® &   Intrado Viper®

Communications
♦ Informacast® & Twitter®

A Dashboard that Delivers
Real-Time Situational Awareness

SafePointe

SafePointe... a versatile tool to improve emergency incident response and enable day-to-day facility management from a single dashboard.

Campus safety is a daunting task for administrators, staff, professors, first responders and many other stakeholders (public & private). Often times, safety systems and solutions are implemented in response to an incident, either personally experienced by the university or from the news headlines. These solutions are implemented and ready in the event an incident occurs. Universities have implemented annual or biannual incident response training and specific mock incident response, like active shooter scenarios. However, without daily use of the system, staff may not become proficient and the solution can quickly be set aside for manual processes during an incident.

The SafePointe solution is developed for daily use providing an easy to use dashboard to access student data, sensors, HVAC, cameras and many other systems used in daily school management.

With SafePointe, if an incident occurs, the systems are second nature to administrators, security personnel and staff since they utilize it every day.

Knowledge and Information are power: Access to real-time incident information enables better informed and faster lifesaving decisions to protect students and staff.

When seconds count…..Count on SafePointe!
